

Covered Pans

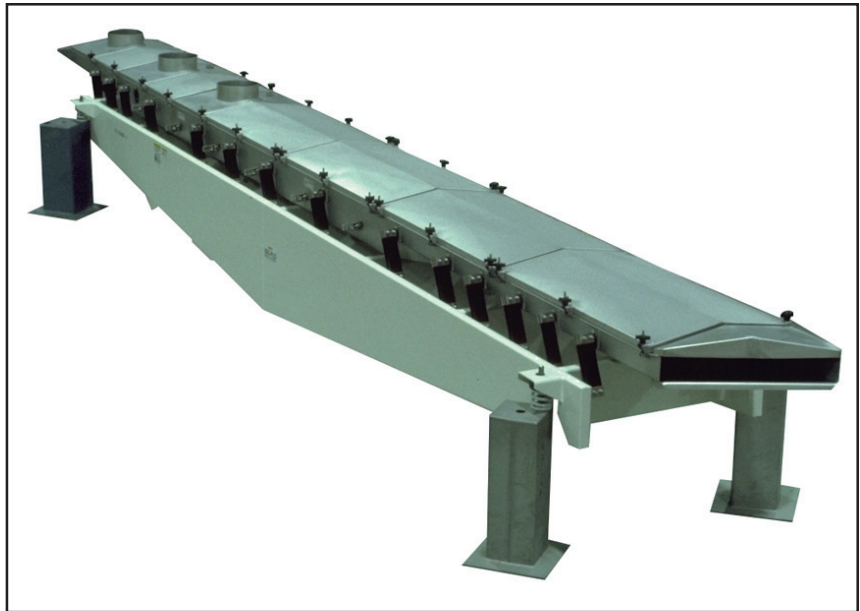

Iso-Flo® and Impulse™ shakers can include hoods to keep contaminants out of the product zone, or to contain airborne product dust released during conveying.

Conveyor hoods are used extensively in the cereal industry and other industries where bulk conveying of powdered materials is common. Key's practical designs allow convenient access for inspection and cleanup. Clamps and hold-downs are easy to use, and ensure quiet operation. For some applications, Key's Vector-Lock™ clamp is an excellent choice.

Common Product Applications

- Candy
- Cereal
- Dehydrated food
- Dry ingredients
- Dry pasta
- Grain
- Minerals
- Nuts
- Pet food
- Pharmaceuticals
- Plastic flake
- Powders
- Salt
- Tobacco

Other applications may be used on this equipment. Call Key to find out about how your product(s) may benefit from this technology or another system.

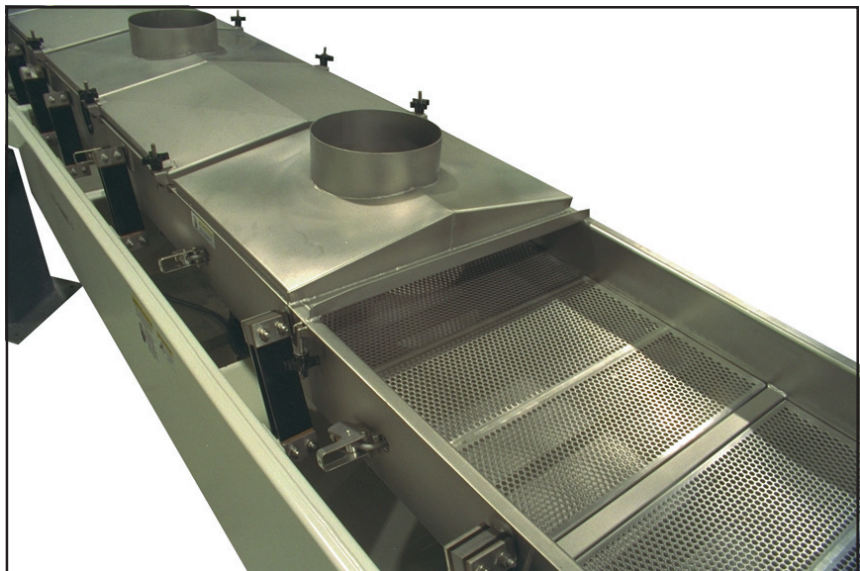

Full Hood

Full Hood

- Helps contain airborne product dust released during conveying
- Keeps foreign materials out of product zone
- Allows quick and easy access for cleanup and inspection
- Positive clamping system for rattle free operation
- Hinged or fully removable
- Custom designs for most needs
- Square and round inlets

Partial Hood

- Helps keep foreign materials out of product zone
- Allows quick and easy access for cleanup and inspection
- Positive clamping system provides rattle free operation
- Hinged or fully removable
- Custom designs for almost every need
- Square and round inlets

Partial Hood
